

IN THE CLAIMS

Claims 1-3 cancelled.

4. (Original) A coupling for enabling interconnection between a pressurized toilet flush unit and a toilet tank outlet, said pressurized toilet flush unit comprising a depending threaded spud with a mounting flange thereabout, said coupling comprising:

a gasket for providing a seal between said mounting flange and a toilet tank floor;

an adapter for centering the spud in said toilet tank outlet said adapter having an expandable collet; and

a spud nut for compressing and centering the adapter against said toilet tank floor within the outlet.

5. (Original) The coupling according to claim 4 wherein said collet has an inside diameter sized for snugly receiving the threaded spud and an outer diameter for snugly fitting the tank outlet and a centered flange having a diameter greater than a diameter of the toilet tank outlet.

6. (Original) The coupling according to claim 5 further comprising a sponge gasket for sealing between the centered flange and a toilet bowl.
